

DAY 4

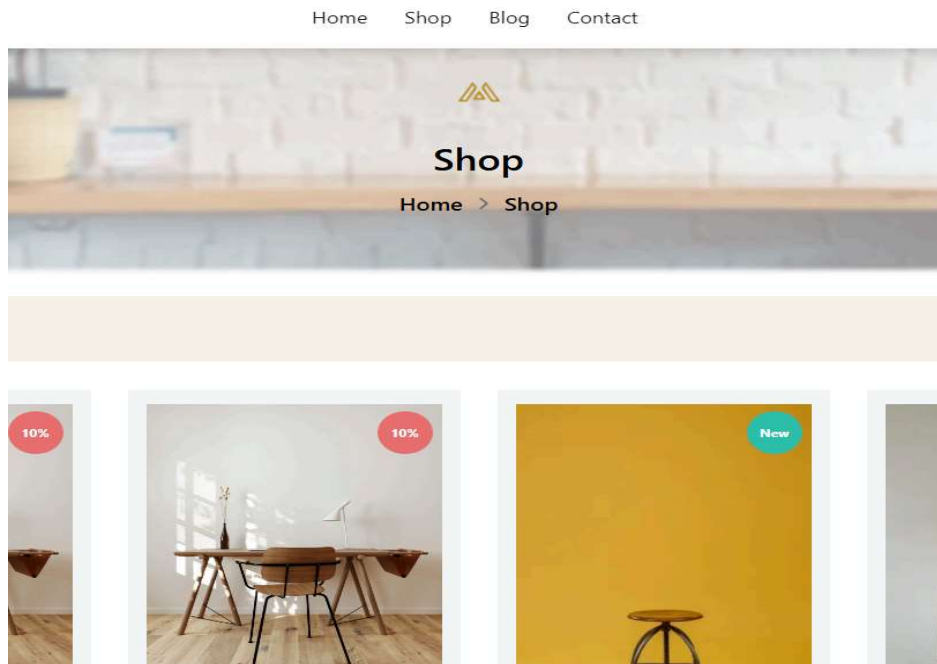

“Building Dynamic Frontend Components”

I focused on Dynamic Frontend Components using sanity CMS and API for a real-world client project , Furniro. I implemented multiple dynamic functionality on my responsive UI, including search filters, product listing, cart management, and add to cart, wishlist, product comparison and dynamic update. Emphasis was on modular design, state management, and creating a seamless UI/UX with a professional workflow, enhancing both usability and content management.

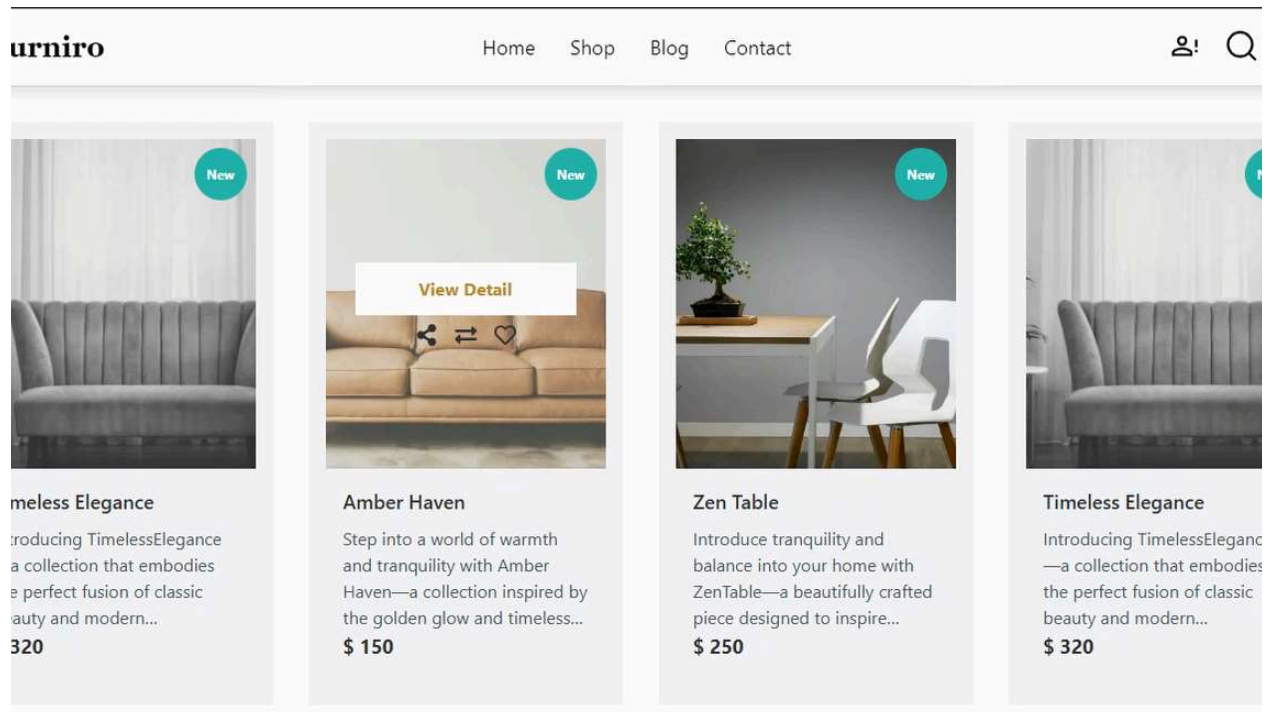

Furniro Marketplace:

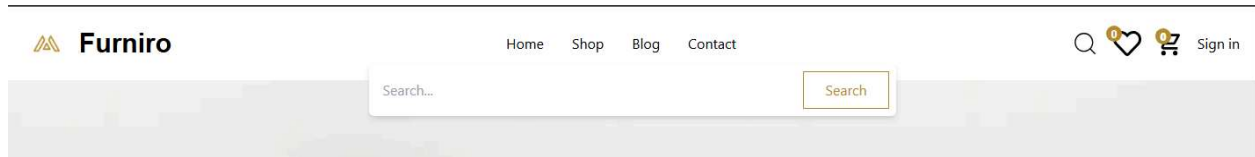

. Shop Components

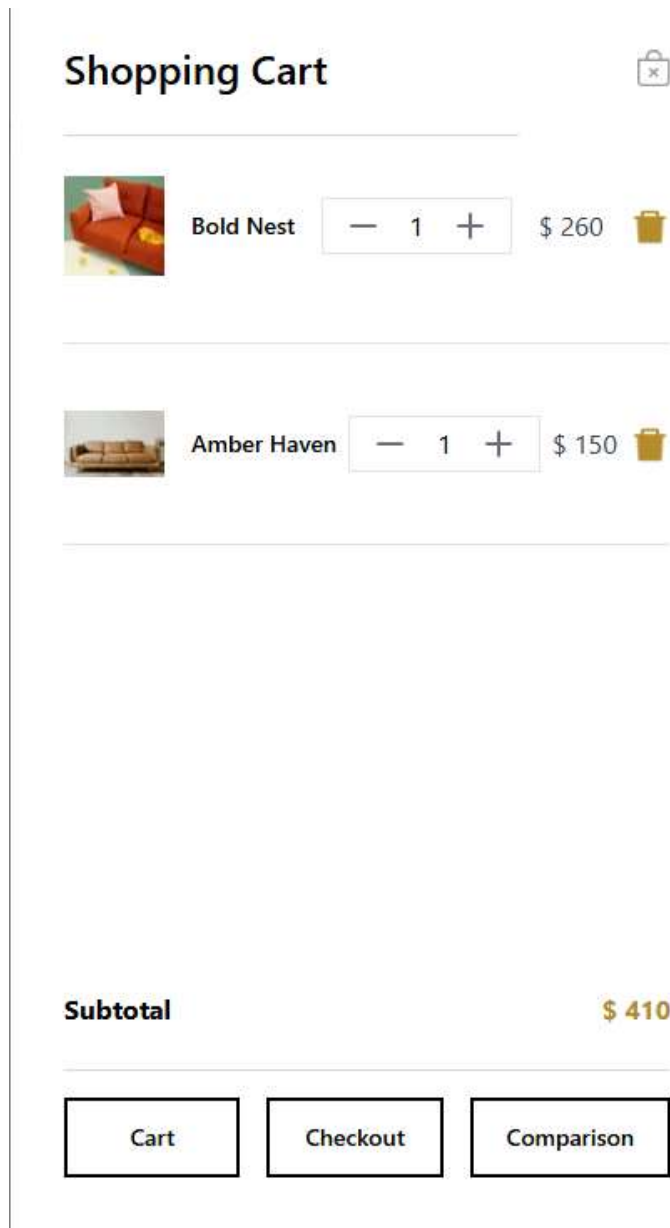

. Product Listing Components

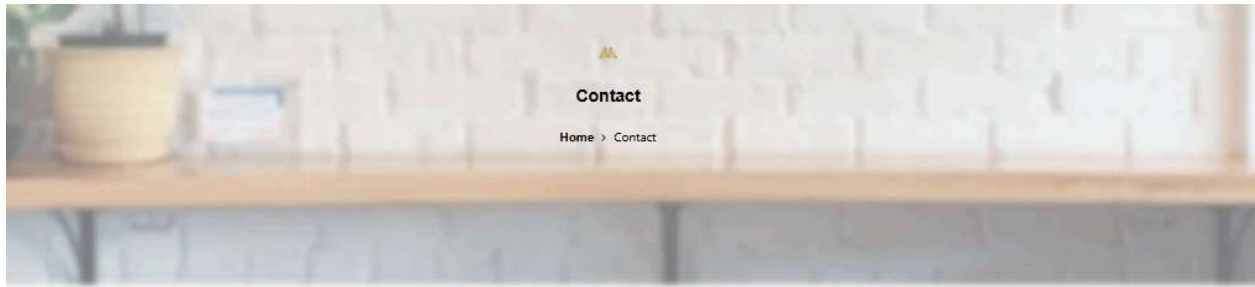

. Search Bar

. Cart Component

. Contact Component
